

EYAD ELFAR

AI Engineer | ML, LLM, Agentic & Production AI Systems

Dubai, UAE | +971589794339 | eyadamen588@gmail.com | linkedin.com/in/eyadelfar | github.com/eyadelfar
eyadelfar.github.io

PROFESSIONAL SUMMARY

AI/ML Engineer with a Data Science foundation and strong hands-on experience in Python, PyTorch, TensorFlow, and Computer Vision. Skilled in object detection, segmentation, document vision, multimodal AI, and LLM-based workflows, with experience moving models from preprocessing and training into deployed applications. Strong focus on practical model performance, clean deployment, and measurable workflow improvements across real estate, fintech, retail, and education.

SELECTED HIGHLIGHTS

- **Trajectory:** Progressed from Data Science into AI Engineering, moving from experimentation and analytics into ownership of deployed ML and AI systems.
- **Technical Focus:** Works across computer vision, VLMs, LLMs, forecasting, and automation, with hands-on use of PyTorch, TensorFlow, OpenCV, FastAPI, Docker, MLflow, and cloud deployment.
- **Impact:** Delivered systems that reduced manual work, shortened reporting and content workflows from hours to minutes, and supported real-time decision-making in live business environments.

PROFESSIONAL EXPERIENCE

AI Engineer

July 2025 – Present

[Baron & Cabot](#) • On-site, Dubai, UAE

- Designed and launched a real-time sales copilot using FastAPI, React, WebSockets, Vertex AI, RAG, and semantic caching, delivering sub-second guidance for live objection handling and property recommendations.
- Built production AI voice-agent workflows handling thousands of qualification calls daily, with real-time availability checks, automated meeting booking, and structured CRM enrichment.
- Launched a Google Cloud Run platform automating dozens of stages across the property lifecycle, including Gemini Vision document checks, bidirectional CRM synchronization, and Twilio WhatsApp outreach.
- Developed a performance intelligence platform using LangGraph, n8n, and MLflow, consolidating meeting quality, call activity, benchmarking, progress tracking, meeting preparation, and configurable management reporting into a unified analytics workflow.
- Built Python data pipelines with incremental HubSpot synchronization powering a multi-factor scikit-learn lead-scoring model, natural-language Meta Ads analytics, and 10-year ROI modeling tools for faster sales decision-making.

Data Scientist

Apr 2024 – Apr 2025

[MENRV.AI](#) • Remote, UAE

- Delivered a computer-vision merchandising suite for fashion retail use cases, using Gemini VLM workflows for image editing and virtual try-on, reducing catalog content creation from hours to minutes.
- Built an AI presentation assistant that generates complete presentation decks with custom imagery, with automated image generation and slide composition and export in under 5 minutes.
- Developed a financial forecasting engine using 20+ technical indicators, reducing reporting workflows from 8 hours to 5 minutes.
- Shipped a multilingual TTS system covering 50+ languages, expanding product accessibility across global users.

AI Engineer (Contract)

Nov 2024 – Apr 2025

NEOMI • Remote, Egypt

- Designed the core AI engine for an AR learning platform serving 10K+ students, fine-tuning a ResNet architecture in PyTorch to extract spatial features from abstract block compositions and pairing it with an LLM evaluator that achieved 90%+ alignment with educator-defined creativity benchmarks.
- Used MLflow to track experiments, model versions, and evaluation results, improving model review and deployment reliability across vision-based assessment workflows.
- Scaled the platform across 20+ school deployments with CI/CD pipelines and self-updating analytics dashboards, reducing educator debugging time by 75% and grading time by 60%.

AI Instructor

Dec 2023 – Mar 2024

iSchool • Hybrid, Egypt • Concurrent with B.Sc.

- Taught Python and AI to 70+ students across 64 sessions, coaching 36 to build and present working RL-driven games, and designed hands-on curriculum with Scratch, Arduino, and PictoBlox.

Data Analyst

Sep 2023 – Dec 2023

e-finance • On-site, Egypt • Contract, extended to project completion

- Supported enterprise analysis of 500M+ digital payment transactions, helping surface 10+ behavioral insights used in executive reporting and decision-making.
- Contributed to ETL optimization and reporting automation, improving data throughput, reducing manual monthly reporting work, and keeping pipeline latency stable.

SELECTED PROJECTS

- **Gamers' Mental-Health NLP Classifier:** 94% accuracy across 5,000+ posts with SHAP explainability; earned a Kaggle Bronze Notebook Medal. [Notebook](#)
- **Cigarette-Butt Detection, YOLOv8:** Fine-tuned pretrained YOLOv8 after benchmarking Faster R-CNN, built the dataset in Roboflow/Kaggle, and achieved 0.70+ mAP@50 for real-time detection with OpenCV, FastAPI, Docker and dashboard integration. Project for a confidential organization; won Best Project medal. [Code](#)

CORE SKILLS

AI / ML: Computer Vision, Object Detection, Segmentation, Tracking, YOLOv8, RF-DETR, Faster R-CNN, DINOv2, VLMs, LLMs, RAG, Agentic AI, Multimodal AI, NLP, Fine-tuning, LoRA/QLoRA, Distillation, Quantization, Reinforcement Learning

Frameworks: Python, PyTorch, TensorFlow, Scikit-learn, Hugging Face, OpenCV, LangChain, LangGraph

Engineering: SQL, FastAPI, Flask, REST APIs, GraphQL, WebSockets, React, JavaScript, Docker, Kubernetes, CI/CD, Git, Nginx, Redis, RabbitMQ

Cloud & MLOps: Google Cloud, Vertex AI, BigQuery, Cloud Run, Cloud SQL, Cloud Build, MLflow, Airflow, Kafka, ONNX, TensorRT, Snowflake, Redshift

Data: PostgreSQL, MySQL, MSSQL, ETL pipelines, data preprocessing, model training, model evaluation, data visualization

Automation: n8n, Twilio, Selenium, BeautifulSoup, Scrapy, ElevenLabs, Retell AI, Dograh, Vapi

Languages: Arabic (Native), English (Professional)

EDUCATION

B.Sc. in Computer Science & Artificial Intelligence

Sep 2020 – May 2024

Helwan University · Egypt · Grade: *Excellent with Honors*

Thesis: Built a real-time one-shot attendance system using YOLO, RetinaFace, and MTCNN for face detection, recognition, counting, and duplicate removal, with attendance records stored in MySQL and integrated through MS SSIS for live dashboard reporting.

CERTIFICATIONS & HONORS

- **McKinsey Forward | Natural Language Processing Specialization** · Coursera, 2024
- **Machine Learning Nanodegree** · Udacity & EGFWD | **Data Science Diploma** · Orange Digital Center, 2023
